HACKCOM 2022 Theme
'Deteriorating Mental Health'

Dear Participants,
This year at hackcom, we are providing you an opportunity to build solutions that drive social impact, with the aim of tackling some of the challenges related to the current rise in mental health issues around the globe.

Recently, various technologies have emerged, created with an aim to positively impact the community in these difficult times. We're expecting you to take the next 24 hours to come up with a technological solution to make this situation easier for people all across the globe.

Here are just a few directions you can proceed in:

A tool to track and examine a person's progress with mental health
An app to educate people about mental health.
A platform for people struggling with mental health to find a safe space.

There is a massive scope for ideation and innovation in this theme and we, as the organizers, are expecting to see some great solutions!

We will regularly be hosting zoom meetings to keep a track of the progress. Kindly make sure that your entire team has a whatsapp group with +91 8601444494(Agam Bhasin) and +91 9511434431 (Ujjwal Rastogi) added in it for coordination.

You have until 10 AM, 16th October 2022 to finalize your project.
Best Of Luck!

Regards,
Agam Bhasin,

Jaipuria Computer Club.
